Hard surfaces are a major source of workplace contamination.

During flu season, wipe down high traffic spots like desktops, door knobs, photocopy machines and the breakroom microwave and fridge doors more frequently. Did you know that Lysol disinfectant spray kills 99.9% of viruses and bacteria on hard non-porous surfaces? This includes the Influenza, Rhinovirus and Strep viruses when used as directed. So don't wait... degermify now before it's too late!

You're in good hands with our line of sanitizer & germ killing products.

Protect yourself and your co-workers this cold and flu season by washing and disinfecting your hands frequently. Hand washing is one of the most effective ways of keeping healthy any time but especially so during flu season. How you wash your hands is also very important. Lather your hands for at least 20 seconds which is roughly the amount of time it would take to sing Twinkle Twinkle Little Star, Happy Birthday or run through the ABC song! (But probably best not to use your outside voice)
